implementation of your idea!

Ready for action with every fiber

smart acoustic products

Solutions for the implementation of your idea

Panels, pads, wool, as well as our bluefiber custom-made products are acoustically highly efficient, lightweight, resilient, abrasion-resistant, particularly impact-resistant, and flame-resistant.

Did you hear that? No? That's it!

The bluefiber brand represents Sandler acoustics solutions with true innovation. Our smart acoustic products stand for responsibility and transparency in all areas. Well thought out, ready to use, and durable: With bluefiber you are making a smart choice.

bluefiber tec based signifies quality – you have our word

bluefiber combines safety, quality, and above all innovative technology. This smart acoustic technology is not only the basis for bluefiber products, it is also a seal of quality for acoustics solutions made from it. Choose quality you can build on.

For a healthy environment

smart acoustic polyester

We take responsibility

bluefiber products are 100 % single-polymer and therefore sustainable: Made to a large extent from recycled PET bottles, the high-tech materials are also recyclable themselves. They are odorless and, in contrast to other fibrous materials, do not pose health risks to workers and users alike. You wear it on your skin every day – we process it in our product: polyester.

Durable and lightweight for lasting sound insulation

Smart acoustic polyester has additional advantages over other materials: It is resistant to ageing and to various environmental influences. bluefiber products are therefore durable and, owing to their open-pore structure, efficiently dampen sound – free of harmful substances and entirely without chemical additives. Best of all: The nonwoven is fully recyclable even after many years of use.

The material can be reprocessed and fed back into the production process. In this way, the use of new resources is kept to a minimum. In comparison with wood or other fibrous materials, polyester is also considerably lighter, the fibers are more resistant to breakage, and thus the products are easier to handle. Our bluefiber products are flame-resistant and tested according to EN 13501.

smart acoustic recycling

Innovative, unique, smart!

The right fiber composition makes all the difference!

Polyester fibers are our specialty. Therefore we know: The right fiber composition and the right processing technology are key. bluefiber combines both. Our customers can rely on the functionality and stability of bluefiber.

Full innovation ahead!

The bonding of the polyester fibers is a unique smart acoustic technology that differentiates us from our competitors. With bluefiber, we bank on innovation. Experience our special products for yourself.

The optimum is just good enough!

From the first product idea to the manufacture of our smart acoustic products: Our state-of-the-art processes are optimized. This way, we are able to guarantee our customers highest quality and efficient sound insulation.

We like it quiet. How about you?

Acoustical optimization enhances our well-being at home, at the workplace, and in public buildings. With bluefiber you can create quiet spaces. Its sound absorption performance speaks for itself.

smart acoustic applications

You want to implement your idea for an acoustics project? bluefiber products are perfectly well thought out to this end, no matter whether your application is in the construction industry or in technical insulations. Utilizing the smart acoustic technology, panels, pads, wool, and all custom-made products are suitable for diverse acoustics applications.

Sound insulation in interior acoustics

For a quiet workplace

Use the smart acoustic products to create a quiet working atmosphere. Applying bluefiber in open-plan offices, public buildings, or even class rooms will provide for pleasant acoustics.

Sound insulation in construction

For silence in the room

With bluefiber smart acoustic technology you choose particularly processor-friendly sound-insulation. Augment classic drywall products with bluefiber and optimize the hearing conditions in any room.

Smart and ready to use in interior acoustics

Owing to the special technology, bluefiber products dampen any noise efficiently. No matter whether the material is used for partitions between the workspaces, as panels on ceiling and walls, or for any other acoustic solution: bluefiber turns any room into a quiet place.

Smart and ready to use in construction

bluefiber smart acoustic products are resistant to moisture, as well as particularly functional. And best of all: Compared to other fibrous materials, bluefiber products do not pose any health risks to craftsmen and users.

Working undisturbed in an open-plan office: No problem, owing to sound insulation with our bluefiber products.

Using our highly efficient bluefiber products in construction you create a pleasant and quiet environment..

smart acoustic applications

Sound insulation in industry & engineering

For quiet machines and appliances

The smart acoustic technology is suitable for technical applications such as machine insulation and industrial noise reduction in factories. The products demonstrably reduce noise pollution.

Smart and ready to use in industry & engineering

In sound insulation for compressors and heating systems, as well as in sanitary installations or vacuum cleaners, and other electric appliances: bluefiber smart acoustic products provide sound insulation in industry and engineering.

Enclosing machines and equipment in industry, bluefiber products are the ideal solution for noise dampening.

smart acoustic products

smart acoustic wool

Lightweight and highly efficient in sound absorption

bluefiber smart acoustic wool makes homes, workspaces, and public buildings quieter places. These products impress with their extraordinary lightness and resistance to moisture, coupled with excellent performance.

- Suitable for e.g.:
- acoustic layer
 - acoustic backing
 - cavity absorber
 - ...

smart acoustic products

 Availability and specifications of bluefiber products may vary depending on the region..

smart acoustic panels

Ready to use and individual for your ideas

bluefiber smart acoustic panels not only provide 100 % sound insulation, they are also ready for use to implement your ideas. The uniquely needle-punched bluefiber panels are available in a variety of versions.

Suitable for e.g.:

ceiling panel wall absorber office furniture (visual cover, partition wall) ...

smart acoustic pads

One solution for many ideas

smart acoustic pads are the efficient solution for a variety of acoustics applications, perfectly complementing the bluefiber product range. Discover the different versions of the lightweight bluefiber product and choose the smart way of implementing your idea.

Suitable for e.g.:

ceiling solutions suspended ceilings applications in frames ...

bluefiber custom-made

Your individual acoustic solution

We tailor our bluefiber custom-made products perfectly to your individual requirements. Choose the ideal solution for your application. Different combinations of fiber composition and production process allow for a specific adaptation of the bluefiber products to the requirements of the respective application.

Your partner in acoustics

Based on decades of experience with nonwovens, Sandler has built up comprehensive and extensive expertise and has grown steadily in the process. Sandler stands for quality, innovation, and further development, as illustrated by its different certifications.

smart acoustic know-how

Experienced and innovative in nonwovens

Comprehensive know-how and true innovation make Sandler an ideal partner. bluefiber nonwovens are acoustically highly efficient materials. Discover the right smart acoustic product for your application.
